Informatics graduate from Institut Teknologi Kalimantan with expertise in building robust backend and fullstack solutions. Enterprise-grade systems such as ERP dashboards, POS setups, and smooth booking platforms are crafted with a focus on efficiency and reliability. Proficiency in TypeScript, Node.js, Express, Nuxt.js, and PostgreSQL is leveraged to architect efficient databases and build reliable APIs. Applications are maintained and optimized through hands-on VPS management, driven by a commitment to creating scalable, high-impact technology.

Experience

Full Stack Developer — Balikpapan, Kalimantan Timur
PT. Planet IT — 09/2025 - Present
- Managed VPS infrastructure and maintained deployment pipelines to ensure smooth and efficient application release processes.
- Resolved production bugs and performed routine troubleshooting to minimize client-reported operational issues.
- Conducted periodic production data fixes and system audits to ensure data integrity and accurate reporting.

Freelance Full Stack Developer — Remote
Upwork — 10/2025 - 03/2026
- Maintained Firebase Functions and Firestore services using TypeScript to support automated appointment scheduling and WhatsApp customer re-engagement workflows.
- Maintenance Flutter applications, integrated REST APIs with Google Cloud, and resolved cross-platform issues.
- Performed feature testing, reviewed pull requests to maintain code quality, and collaborated with the team to deliver reliable, production-ready releases.

Backend Developer Intern — Bontang, Kalimantan Timur
PT. Indominco Mandiri — 06/2024 - 08/2024
- Maintained and developed backend systems (Node.js, REST API, PostgreSQL) to ensure operational service stability.
- Coordinated directly with stakeholders to translate business requirements into technical features, ensuring backend development aligned with end-user expectations.
- Collaborated with the frontend team on API integration to ensure consistent data flow and minimize technical issues.

Cloud Computing — Remote
Bangkit Academy — 08/2023 - 01/2024
- Designed and deployed virtual machines on Google Cloud for scalable backend systems.
- Implemented APIs with LLM-integrated chat services.
- Collaborated with mobile and machine learning teams to develop a chatbot application using Flutter, REST, and an LLM-based backend.

Education

Bachelor of Science in Computer Science, Institut Teknologi Kalimantan — 2021 - 2025
GPA: 3.59 / 4,00

Relevant Courses: Software Implementation and Testing, Web-Based Application Development, Functional Programming, Software Analysis and Design, Data Structure, Introduction to Probability and Optimization, Database Management, Distributed Systems

Projects

Mobile Chat App — August - November 2024
- Mobile app with Socket-based backend and LLM integration
- Real-time chat application with random people 1:1 or bots based on mobile applications.

Technologies: ExpressJs, Typescript, Nginx, Postgresql, Flutter, WebSocket

Skills

Technical: JavaScript, TypeScript, Node.js, Express.js, RESTful API (REST), Vue.js, Nuxt.js, Python, SQL, NoSQL, PostgreSQL, WebSocket, Object-Oriented Programming (OOP), Database Design, API Integration.

Tools & Platforms: Git, GitHub, Docker, Nginx, Postman, Figma, Firebase, Google Cloud Platform (GCP), Amazon Web Services (AWS), Linux, CI/CD, VPS Management, Agile/Scrum.

Soft Skills: Problem Solving, Time Management, Decision Making, Adaptability, Team Collaboration.

Certifications

- Building Back-End Applications for Beginners with Google Cloud (dicoding, 2023) ↗
- Web Programming Fundamentals (dicoding, 2023) ↗
- CI/CD Implementation (dicoding, 2023) ↗
- Git Fundamentals with GitHub (dicoding, 2023) ↗
- Becoming a Google Cloud Engineer (dicoding, 2023) ↗
- Becoming a Google Cloud Architect (dicoding, 2024) ↗
- Becoming a Linux System Administrator (dicoding, 2023) ↗
